## PROJECTS

---

Flask Weather Application

- I developed a web application using Flask that provides real-time weather information and outfit suggestions based on the user's location and style preferences.

Password Generator

- Generates random and secure passwords based on user-defined criteria such as length and inclusion of uppercase letters, lowercase letters, numbers, and special characters.

Food Website

- The Food Order System is an E-commerce web application developed using Django Framework in back-end , CSS in front-end . It contains features such as view all food items, add food items and finally checkout

Currency Converter

- Currency Converter that fetches real-time exchange rates is an excellent project to practice working with APIs, user input, and basic GUI design
